

Acer truncatum x platanoides 'Warrenred' Pacific Sunset® Maple PP7,433

Zone: 4b-8

Height: 30'

Width: 25'

Crown: Round Spreading
Growth Rate: Fast
Soils: Clay, Loam, Sand
pH: Acidic, some Alkaline
Breakage: Resistant

Introduced by the fine people at J. Frank Schmidt & Son Co, Pacific Sunset® is an excellent tree for many parts of the US. It's a vigorous tree with a tendency to grow almost too fast. As with most spreading trees, this one doesn't want to push a straight single leader. It will have to be staked to assure the tree grows where you want it to. The higher you can force the central leader, the better tree you will have. Lateral branches also tend to grow very quickly, and should be pruned back the first few years to keep the tree going up instead of out. The branching angle is very good. This tree will be structurally sound with age. Dark glossy green leaves are followed

in fall with a bright display of yellow, orange and red. Robinson Nursery offers Pacific Sunset® as bare root whips.
