

Caragana arborescens 'Pendula'

Siberian Pea Shrub

Zone: 2b-8a

Height: 10'-12'

Width: 8'-10'

Crown: Weeping mound
Growth Rate: Fairly rapid
Soil: Clay, loam, sand
pH: Acidic, alkaline
Drought: Very tolerant
Drainage: Well drained
Salt: High tolerance
Pests: Few if any

Here is a great little plant for the landscape that is adaptable to a wide variety of situations. It is drought tolerant, will grow well in alkaline or acid soil, and will take salt. All it needs is good drainage. Caragana is at its best in the spring when it has abundant bright yellow flowers. The rest of the year it is an interesting mounded form in the landscape, either in foliage or without. And hardy to Zone 2b, look out Minnesota, here we come. Robinson Nursery offers Caragana Pendula on a 36" standard.
