Crown: Pyramidal  
Growth Rate: Fast  
Soil: Clay, loam, sand  
pH: Acid, alkaline  
Drainage: Wet or well drained  
Drought: High Tolerance  
Breakage: Resistant

'Patmore' is probably the best Green Ash in the trade. It is easy to grow compared to some older varieties. It has good shape and size, nice color. It is very hardy and grows well in the Mountain States as well as the rest of the country. It is urban tough and always looks lush and healthy in the city environment. Unfortunately, a borer has been Introduced from China into the upper Midwest. Suddenly, demand for this tree and other Ash has disappeared. The Emerald Ash Borer is slowly spreading despite all that mankind is doing. The Ash is going the way of the Chestnut and the Elm. We still offer 'Patmore' as bare root whips.
