

Ginkgo biloba 'Princeton Sentry'® 'Princeton Sentry'® Maidenhair

Zone: 4-8

Height: 60'

Width: 25'

Crown: Upright, erect

Growth Rate: Slow until established

Soil: Clay, loam, sand

pH: Acid, alkaline

Drainage: Well drained

Drought: High tolerance

Salt: Poor tolerance

Breakage: Resistant

Pests: Few if any

'Princeton Sentry'® is a selection from Princeton Nurseries in New Jersey. It was chosen for its very upright habit, vivid gold fall color and because it is a male plant. It will take patience to wait for this tree become large. It will do so only once it is firmly established. There are several massive specimens on the capitol grounds in Salem, Oregon. Once found only in the fossil record, a small forest was discovered in China. Since then it has spread and become well loved. The clean, unusual leaves of this deciduous conifer are eye catching. The drought tolerance and lack of diseases have made it a very successful tree. It also takes urban conditions such as compacted soil and pollution in stride. Robinson Nursery offers 'Autumn Gold' as bare root whips and branched trees. Soon to be offered as a #3 Grow Ready™ liner.
