

Malus 'Coralburst'®

Coralburst® Ornamental Apple

Zone: 4

Height: 15'

Width: 15'

Crown: Compact, dense, round
Growth Rate: Slow
Soil: Clay, loam, sand
pH: 5.5-7.5
Drainage: Well drained
Drought: Moderate tolerance

'Coralburst'® is a real treat. It has very short inner-stems and its also a slow grower. It's size makes it a perfect candidate for grafting on a standard, and that's just what we do. The foliage is narrow, furrowed, very dense and almost sharp looking. In spring, dark pink buds open to double pinkish white fragrant flowers which last for two weeks.

In late summer a very small bronze fruit appears. This "apple on a stick" takes pruning very well and it is easy to keep within a certain size range. It works well as a patio container tree or a specimen in the yard. Robinson's 'Coralburst'® are grafted on a 42" standard.
