

Quercus alba - White Oak

Zone: 3-9

Height: 50'-80'

Width: 50'-80'

Exposure: Full sun

Crown: Pyramidal when young,
rounded with age

Growth: Slow

Soil: Adaptable

pH: 6-7.2

Drainage: Moist or dry

Drought: Tolerant

Quercus alba is a native of eastern America, from the southern tip of Texas to the northern tip of Ontario; from west Nebraska to Cape Cod. It produces excellent hardwood lumber. This is a very large, slow growing tree. It needs a site with enough space to grow. Leaves are large, alternate, simple and lobed. Fall color is yellow to gold. Catkins are 2"-4" long and appear in spring. Acorns are large and useful to wild life.
