

## Acer rubrum 'Magnificent Magenta'®

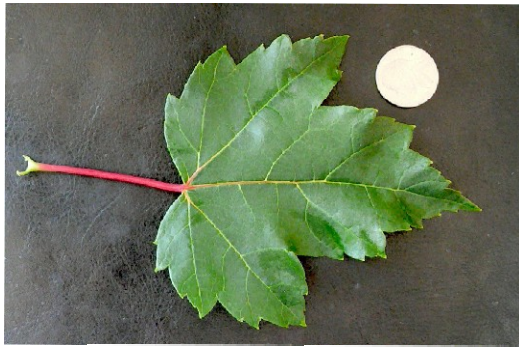

## Burgundy Belle Maple PP 7222

Zone: 3

Height: 45'

Width: 35'

Crown: Oval to Round, Compact, Uniform  
Soils: Adaptable to various soils, tolerates  
wets soils & drought  
pH: 6.5 or lower

The original Burgundy Belle was found in Kansas. It had an oval to round, very dense crown. What really set this tree apart was its magenta or red-violet fall color. The picture left is close to the real fall color. When the sun shines through these leaves they simply glow. Burgundy Belle is said to have its colored leaves on show for up to six weeks in October and November, and be able to still hold onto its leaves after a couple hard frosts. We have heard from customers that it gets through hard winters better than A. rubrum Northwood, as far north as the Twin Cities. Robinson has Acer Burgundy Belle in whips and branched trees.
