

## Cornus mas 'Golden Glory' 'Golden Glory' Cornelian cherry Dogwood

Zone: 4-7

Height: 20'

Width: 15'

Crown: Round  
Growth Rate: Slow  
Soil: Adaptable including alkaline  
Flower: Yellow  
Fruit: Bright red  
Fall Color: Red  
Drought: Moderate

This is a small tree or large shrub with a slow growth rate. It offers great features three seasons of the year. In February or March it is loaded with bright yellow flowers. Come July and August, bright red berries appear, only to be removed later by the birds. In fall, the leaf color turns red. Cornus mas prefers part

shade or full sun and is adaptable to a variety of well drained soils. Wet feet may be a problem. If grown for a tree, it should be encouraged to the desired height, then allowed to fill in. Otherwise little pruning is required. 'Golden Glory' is available from us in tree form and clump form.
