Exposure: Full sun
Crown: Large spreading
Growth: Slow
Soil: Adaptable
pH: Acidic
Drainage: Well drained
Drought: Somewhat once established
Droopage: Low branches tend to droop
Pests: Aphids
Disease: Powdery mildew

Difficult to transplant except in our Grow Ready Liners™, this impressive tree is not especially suited to urban situations. Give it room, however, and it will become a striking specimen. Bright green leaves meet the spring, turning to golden bronze in the fall; silvery bark is visible in the winter. This tree is excellent for native plantings in the East. Shallow roots and deep shade make for a
