

Platanus x acerifolia 'Exclamation' - London Planetree

Zone: 4-8

Height: 60'

Width: 30'

Exposure: Full sun, good air circulation

Crown: Upright, pyramidal

Growth: Moderate

Soil: Adaptable

pH: Adaptable

Drainage: Varied

Drought: Tolerant

Pests: Few

Disease: Resistant to Anthracnose, powdery mildew

'Exclamation!'™ was developed by Dr. George Ware at the Morton Arboretum in Chicago.

It is a hybrid developed specifically for Anthracnose and frost crack resistance. It is strongly conical in youth and matures to an upright pyramidal form, making it very useful in as a street tree or for narrow lots. It has a strong central leader, making it easier to grow. 'Exclamation!'™ has attractive brown, green, tan, cream and white exfoliating bark from an early age. It is adaptable to a wide range of soils, including poor and construction soils. It is very drought tolerant and will stand some periods of standing water.
