

Prunus 'Snowfozam'

Zone: 5-8

Height: 12'

Width: 12'

Crown: Weeping

Growth: Fast

Soil: Loam, sand

pH: Acidic

Drainage: Well drained

Drought: Moderate

Breakage: Resistant

Snow Fountains® Weeping Cherry

Snow Fountains® is another introduction from the folks at Lake County Nursery. Somewhat similar to 'Double Sub', except it has clear white flowers. The foliage is darker and the fall color is a very showy red. Rather than sending arching branches vertically like 'Double Sub', Snow Fountains® grows only as high as trained and then simply weeps. All cherries should be planted in full sun and loamy or sandy soil which is well drained. Too much clay or water, or too much drought will doom the tree. Cherries are susceptible to sun-scald.

Wrapping the trunk may be necessary. Adequate water during the growing season is key to protection. Robinson Nursery offers Snow Fountains® grafted on 4' and 6' standards, budded on 6' standards and whips budded at ground level.
