

Viburnum plicatum tomentosum 'Newzam' Newport® Viburnum

Zone: 3-7

Height: 4'

Width: 6'

Crown: Round, spreading
Growth: Moderate
Soil: Clay, loam, sand
pH: Acid, alkaline
Drainage: Well drained
Drought: High tolerance
Breakage: Resistant

Viburnum 'Newport' is an introduction of Lake County Nursery. It is a dwarf, compact dense shrub that matures at 4' high. It prefers moist, well drained loamy soil, but is very adaptable. The creamy white, sterile flowers are snowball-like and attract butterflies. Fall color is red to burgundy. Like most Viburnums, 'Newport' is susceptible to Spider Mite. Introduction of predator Mites has proven to keep the little buggers at acceptable levels.
