

## Acer x freemanii 'Armstrong II'

## Armstrong Maple

Zone: 4-7

Height: 50'-70'

Width: 15'

Crown: Strongly Upright

Growth Rate: Fast

Roots: Surface, could lift sidewalks

Drought: Moderately tolerant

Soil: No alkaline

Armstrong Maple is a strongly columnar tree. It is very vigorous and will grow to 40' tall in 10 years in good conditions. Armstrong becomes a very stately tree faster than almost any other shade tree. In Spring, the red-dish samaras are very noticeable. Leaf color is light green and fall color is yellow-orange to red-orange depending on the year.

Armstrong is an easy tree to grow, usually needing no stake. Proper training of the young tree is important so that the tree does not develop limb crotches with included bark.

Armstrong is cutting grown and we offer it in a range of sizes, from whips to branched trees up to 1 1/4" caliper.
