

'Survivability' – Plant with Confidence

Iced Stewartia

It has been a beautiful fall in Oregon. The autumn blaze along our driveway are in full fall color and the last of the sweet corn planted on our rented out ground is being harvested. This years crop of trees is perhaps the best we have ever grown. Fall harvest of the bare root should begin around the 1st of November. October is the month we catch up on some of the projects that were overlooked in the growing season. I may also have the chance to put a big buck in the freezer.

I want to encourage you to get out and vote. We are blessed to have this opportunity and we should all make good on this responsibility.

Have a great fall
Rick

A constant battle to all of us in the tree business is dealing with credits. We realize when you place an order you do it with the purpose of harvesting 100% of the trees you purchase. Credits result in wasted time, money, labor, and creates a mess of inventory numbers. Our goal is to deliver a plant that you have complete confidence in. At Robinson Nursery we are continuously working to improve our practices so we can offer you liners that not only survive but thrive.

We are proud to report that over the past four years we have reduced the percentage of credits every year. This is a commitment that we have taken to offer you the best liner with the highest chance of survival in the industry. There are many things we can attribute to our improvement; however a large part of this is listening to

what you have to say and taking actions on your suggestions. We value your input and we are only a phone call or email away.

What our customers are saying about our Grow Ready Liners™

"Robinson Nursery Grow Ready Liner's have made a significant improvement on survivability on our Oak and Elm crop. They're easy to handle and cost effective, especially on the more sensitive crops."
